PROFESSIONAL SUMMARY

Results-driven Senior Backend Developer with 3+ years of professional experience architecting and deploying scalable, high-performance backend systems using Python, Django, and Django REST Framework. Proven expertise in leading development teams, managing multiple concurrent projects, and delivering AI/ML-integrated platforms serving 10,000+ active users. Specialized in RESTful API design, database optimization, authentication systems (JWT, RBAC), and automated trading solutions. Strong track record of improving system performance by 30-40%, reducing deployment bugs by 30%, and achieving 100% on-time project delivery. Adept at clean architecture, agile methodologies, and cross-functional team collaboration.

CORE COMPETENCIES

Backend Development: Python • Django • Django REST Framework • FastAPI • RESTful APIs • Microservices
Architecture Databases & Optimization: PostgreSQL • MySQL • SQLite • Redis • Database Schema Design •
Query Optimization • Data Modeling Security & Authentication: JWT • OAuth • RBAC • API Security •
Authentication & Authorization Systems AI/ML Integration: Machine Learning Models • Trading Algorithms •
Data Analysis • Pandas • NumPy • Predictive Modeling DevOps & Cloud: Docker • Docker Compose • CI/CD
Pipelines • AWS • Cloud Computing • Linux (Ubuntu, Kali) Tools & Frameworks: Git • GitHub • Celery •
Message Queues • Background Tasks • Asynchronous Processing • pytest • Unit Testing Leadership &
Collaboration: Team Leadership • Agile Methodologies • Multi-Project Management • Technical Documentation
• Code Reviews • Cross-Functional Team Coordination

PROFESSIONAL EXPERIENCE

Senior Django Backend Developer / Team Lead

NQ7 Group | Sana'a, Yemen | January 2021 – October 2024

- Led cross-functional backend team of 5 developers and supervised frontend team, achieving 100% on-time delivery across all projects while fostering seamless collaboration between development teams
- Architected and developed 40+ scalable RESTful API endpoints using Django and Django REST Framework, reducing mobile application integration errors by 50% and supporting 3+ frontend/mobile platforms
- Established and maintained enterprise-grade internal platforms for 3 major institutions, supporting 5,000+ daily active users with 99.9% uptime through robust architecture and proactive monitoring
- Implemented comprehensive security framework with JWT-based authentication and Role-Based Access Control (RBAC), improving overall system security by 30% across all applications
- Optimized PostgreSQL and MySQL database schemas and queries, achieving 25-40% performance improvements through indexing strategies, query refactoring, and data modeling best practices
- Integrated real-time communication features and asynchronous background processing using Celery and Redis, improving system responsiveness by 30% and enhancing user experience
- Successfully managed 2+ concurrent projects simultaneously, prioritizing tasks effectively and delivering all milestones ahead of schedule while maintaining code quality standards
- Championed clean architecture principles and Django best practices, ensuring maintainable, testable, and production-ready code that reduced technical debt and facilitated team knowledge sharing

Backend & Trading Systems Developer (Freelance)

Remote | March 2022 – Present

- Designed and deployed 5+ independent backend systems from concept to production, serving over 10,000 active users with high-concurrency support and horizontal scalability

- Engineered high-frequency algorithmic trading bots with advanced risk management, multi-strategy support, and real-time market data integration, achieving up to 5% average monthly returns per strategy
- Developed AI-powered Real Estate platform integrated with Machine Learning models for property analysis, improving price prediction accuracy by 20% and managing 2,000+ listings
- Implemented secure RESTful APIs with comprehensive authentication, authorization, and API documentation (Swagger/OpenAPI), supporting seamless integration with 3+ frontend and mobile applications
- Built custom admin dashboards and control panels for managing 50+ system configurations, reducing manual administrative overhead by 40% through automation and intuitive interfaces
- Optimized database architectures for 5M+ records, reducing query execution time by 35% through strategic indexing, denormalization where appropriate, and efficient schema design
- Applied clean code principles and software engineering best practices, decreasing bug incidence by 30% during deployment cycles and improving overall code maintainability
- Managed complete project lifecycle independently—from requirements gathering and system design to deployment and maintenance—achieving 100% on-time delivery across all engagements

KEY TECHNICAL PROJECTS

Real Estate Platform Backend with ML Integration

- Developed comprehensive Django backend managing 2,000+ property listings for real estate sale and rental operations
- Integrated machine learning models for property data analysis, price prediction, and automated market insights generation
- Technologies: Python, Django, Django REST Framework, PostgreSQL, Machine Learning, Pandas, NumPy, Docker, REST APIs

Fashion E-commerce APIs (Django Backend)

- Architected modular backend API platform with 15+ microservices including product catalog, user management, order processing, and analytics dashboards
- Implemented RESTful API endpoints with clean separation of concerns, utilizing Django apps architecture for scalability and maintainability
- Technologies: Python, Django, Django REST Framework, PostgreSQL/MySQL, Media Handling, Modular Architecture, REST APIs

AI-Driven Algorithmic Trading System

- Built ML-driven trading framework processing 1,000+ automated trades monthly across 10+ market scenarios with real-time decision-making capabilities
- Developed Django-based management dashboard for centralized bot configuration, strategy assignment, and runtime monitoring with RESTful API backend
- Technologies: Python, Django, Django REST Framework, Machine Learning, Pandas, NumPy, PostgreSQL, Binance API Integration, Automated Trading Systems

EDUCATION

Bachelor of Science in Management Information Systems

UAE International University | Sana'a, Yemen | Graduated: October 2024

CERTIFICATIONS & TRAINING

Diploma in English Language

Developer Institute | Grade: Excellent (92.6%) | September 2020 – August 2021

Demonstrated proficiency in technical English communication, essential for international collaboration and comprehensive documentation

ADDITIONAL INFORMATION

- Languages: Arabic (Native), English (Professional Working Proficiency)
- Open Source Contributions: Active GitHub contributor with 71 repositories and ongoing contributions to backend development projects
- Technical Writing: Experienced in creating comprehensive API documentation, technical specifications, and developer guides
- Continuous Learning: Stay current with emerging backend technologies, Python ecosystem updates, and industry best practices through active participation in developer communities
